

C Tech Corporation presents at the Agricultural Film 2019 conference, Barcelona, Spain – 18th – 20th November 2019

The 12th edition of AMI's international Agricultural Film conference took place in November 2019 at Barcelona, Spain bringing together agricultural and horticultural cover specifiers, raw material and film manufacturers, involved in agriculture to network with professionals active in this challenging industry and global food supply in general.

C Tech Corporation was invited to present a paper '**Envirosafe and cost-effective additives to protect agricultural films from pest attacks**' which discussed how the agricultural films can be made pest repellent and help achieve maximum crop yield, the compatibility of our products with film polymer and their advantages. It further elaborated on judicious use of our products in the agriculture films in order to protect the crops without having any negative environmental impacts unlike those of the conventionally used toxic pesticides.

With the recent EU BPR approval received for the repellent product's families, this conference was a great opportunity to network with the film manufacturers and suppliers across the global supply chain.
